# Operation Guide 3M-22   Filtrete™   3M

The 3M-22 programmable communicating thermostat operates via a simple keypad. To program or adjust your 3M-22, simply press your finger firmly on the keypad keys. The backlight will automatically light up. You can progam the 3M-22 with unique 7 days or use it like a 5-1-1 programmable with Saturday and Sunday different from all other days of the week. A program that fits your lifestyle can save energy.

Statement of use: 100% Compatible with all popular residential HVAC systems; 24VAC single, two and stage conventional heating systems (gas/oil/electric), heat pumps, single or with auxiliary heat (electric or fossil), zoned forced air and zoned hot water (2 or 3 wire), millivolt systems (with 12-24 AC or DC adapter), one or two stage cooling, and hybrid systems.

Set Clock

Set time of day -
• From the 🏠 screen, Press ◀🕐 or 🕐▶ to set the time. Press and hold to set the time in fast mode.
• Press 🏠 to store your settings.

Set day of the week -
• Press ☀▶ (SET DAY) once to set the day of the week. The day of the week display advances (Initially SU for Sunday). Press ☀▶ again to step throught the days of the week until the correct day is displayed.
• Press 🏠 to store your settings.

Energy Saving Program

This thermostat comes preprogrammed with an energy saving program. This program is recommended for energy efficiency. We strongly recommend that you use this program for one week and see if it works for you. If it does not fit your needs, you can always input a custom program.

EPA	MORN	DAY	EVEN	NITE		MORN	DAY	EVEN	NITE
HEAT	6:00am	8:00am	6:00pm	10:00pm	COOL	6:00am	8:00am	6:00pm	10:00pm
All Days	70°F	62°F	70°F	62°F	All Days	78°F	85°F	78°F	82°F

• To run the energy saving program, select HEAT or COOL with the mode switch. The unit is now running the energy saving program.

• One of the TIME SLOT icons MORN, DAY, EVEN, NITE comes on. This indicates the TIME SLOT active in the energy saving program. For program details refer to the energy saving program chart.

To Change the Program

NOTE: 60 Second Rule- During programming if a button is not pushed within 60 seconds, the unit will go out of the set mode. Everything you have input in this programming will automatically be saved.

• Select either HEAT or COOL by setting the MODE switch.

• Press and hold the MTW ⊞ daily PROGRAM button for 5 seconds.

• Select the day you want to program by pressing ☀▶ to cycle through the days of the week to the desired day.

• Select the Time Slot (period) you want to program MORN DAY EVEN NITE (morning, day, evening, night).

• Select the desired start time of that Time Slot by pressing ◀🕐 or 🕐▶ to set the time. This is the starting time of the Time Slot.
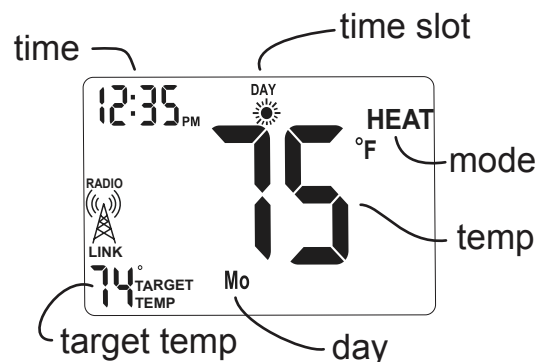

• Select the desired target temperature for that time slot by pressing the +/- buttons to select the desired temperature for that Time Slot.

• Repeat this setting procedure for all four Time Slots MORN DAY EVEN NITE of the day.

• Repeat the setting procedure for all days you want to program.

COPY ▷

This will copy one day's programming to the next day. Press COPY▷ once. The information for the current day will be copied to the next day which will appear on the screen. Holding down COPY for over 3 seconds will copy to all 7 days.

• Press 🏠 to store your settings.

Keypad Functions

TIME ◀🕐 🕐▶

Press ◀🕐 (time backward) or 🕐▶ (time forward) to set the current time. Press and hold the arrow for fast time set (15 minute step).

DAY ☼▶

Press ☼▶ (SET DAY) to set the day of the week. The day of the week display advances (initially SU for Sunday). Press ☼▶ again to step throught the days of the week until the correct day is displayed.

SWING (HVAC cycling rate)

This feature allows you to set the desired variance in temperature between the 3M-22 setting and the room temperature required before the heating or cooling system will turn on—from 0.5° to 2.0° F (.25° to 1° C). For example, if HVAC CYCLING is set to 2.0° F and the 3M-22 is set to 70°F, the heat cycle will start when room temperature drops to 68°F. Similarly, the cooling system will start when the room temperature increases to 72°F. The HVAC then runs and will shut off at the target.

To set **SWING** rate:

• Press **SWING** (under the ☀ DAY icon).

• Press the +/- buttons to select the desired swing from 0.5° to 2.0° F.
The HVAC cycling rate will be more at .5°F and less at 2°F. Default is 1°F

• Press 🏠 to store your settings.

°F
°C **Set -** Press both [☀ MORN | F C] [☀ DAY] to toggle between °F to °C .

FILTER CHECK FILTER ALERT

The 3M-22 is programmed to remind you when the HVAC air filter needs changing. It is set to remind you every 90 days. The **Check Filter** indicator blinks when your filter limit is reached.

To change the time of this reminder:

• Press **FILTER** (under the ☀ MORN icon) to show filter usage to date.

• Press ◀🕐 to clear accumulated days. Press 🕐▶ arrow to restore accumulated days.

• Hold **FILTER** for 2 seconds to set filter limit with **+/-** buttons Filter DAYS are displayed on screen.

• Press 🏠 to store your settings.

🔒 LOCK

The 3M-22 has a simple LOCK mode to avoid unwanted modifications to the thermostat.
To LOCK:
Press and hold HOME for 3 seconds
The LOCK icon will show on screen, All buttons are locked except HOME.
To UNLOCK:
Touch and hold HOME for 3 seconds. The LOCK icon will go out.

CALIB

Your thermostat was accurately calibrated at the factory to ±1° F of actual ambient temperature.
You do have the option, however, to change the display temperature to match that of a previous thermostat, or to match another thermostat already in your home. The range of change is from -6°F to +6°F or -3°C to +3°C.

To change your Thermostat Calibration:

Press **CALIB** (under the **EVEN** icon)
Use the + / - to adjust the displayed temperature up or down, as desired.
The temperature display will show the modified temperature reading that will be displayed on the

HOME screen and used as the new room temperature. Press 🏠 to store your settings.

HOLD

This will make your 3M-22 act like a non-progammable thermostat. It will hold the target temperature you set indefinitely, until you turn **HOLD** off.   Take care using the **HOLD** function as the program is now bypassed.   To set a hold target temperature, press **HOLD** and use the +/- buttons to select your hold temperature.   The **HOLD** icon will display on the HOME screen indicating you have changed the Target Temperature.   The system will **HOLD** this temperature until you return to the manual screen.
To turn off hold press **HOLD** again. **HOLD** is also canceled when you set the mode to OFF.

TEMPORARY override   Touch the + / - buttons to select your desired temporary Target Temperature.   The **TEMPORARY** icon will display indicating you have modified the programmed Target Temperature for the current Time Slot only. It goes back to the program target at the next period. Also once in temporary, when the target is set the same as the programmed target for that Time Slot, the word TEMPORARY will go out.

HOLIDAY PROGRAM

This is a single day program that repeats day after day until you turn it off. It supersedes the weekly program. To use it press ⛰ HOLIDAY. The default holiday program is shown below. [Default program: HEAT 70ºF all day and 62ºF at night. COOL 78ºF all day and 82ºF at night.]

To modify the HOLIDAY program, press and hold the 🎂 button for 3 seconds.

• Select the Time Slot (period) you want to program ☀MORN ☀DAY ☀EVEN 🌙NITE (morning, day, evening, night).

• Select the desired start time of that Time Slot by pressing ◀🕐 or 🕐▶ to set the time.
This is the starting time of the Time Slot.

• Select the desired target temperature for that time slot by pressing the +/- buttons to select the desired temperature for that Time Slot.

• Repeat this setting procedure for all four Time Slots ☀MORN ☀DAY ☀EVEN 🌙NITE of the HOLIDAY program.

• Press 🏠 to store your settings.

NOTE: The default HOLIDAY program is set as 2 periods; all day (same target MORN, DAY, and EVEN) and a different target for NITE.

Other Functions

SAVE ENERGY Button   The "Save Energy" feature on the 3M-22 provides a simple, easy-to-use way to help you manage your energy use. SAVE ENERGY automatically adjusts your target temperature up in COOL or down in HEAT by 4°F.   To use Save Energy, press the Save Energy button in the upper left corner of the unit. The screen will now read "Save Energy".   To return to normal operation, press the "Save Energy" button again. This is useful to save energy if you are gone for a short time.

FAN Switch   The fan control is normally in AUTO mode, meaning that the fan operates automatically with the HVAC system and the thermostat. When the fan switch is in ON, the fan will run continuously until switched back to AUTO.
NOTE: Fan ON function is available in the OFF mode to allow simple ventilating.

EMER HEAT   If you set your 3M-22 for HEAT PUMP with auxiliary heat, EMER function is available with a switch under the top cover on the right. If you switch EMER to ON, your HEAT PUMP is disabled and auxiliary heat is your sole source of heat. This manual override stays active until you switch EMER off.   Auxiliary heat is more expensive than the heat pump so use EMER only if the heat pump cannot keep up or is defective.

RESET button The RESET button re-boots the 3M-22 processor. It does not effect the user programs that have been stored in permanent memory.

Compressor Protection   The 3M-22 has a minimum cycle time of 4 minutes to protect your compressor in cool and in heat pump (if you have one). During this time the compressor will not come on until the 4 minute delay is over.

Simple Screen   This display mode limits the amount of information on screen and limits the functions to just the + and - buttons.
To access the Simple Screen hold down both + and - buttons at the same time for 10 seconds.
To leave the Simple Screen hold down both + and - buttons at the same time for 10 seconds.
