Precautions:

A. If the clock crashes during the running or setting process (the display does not move or displays garbled characters), unplug the power cord, remove the button battery, or replace the power plug and button battery. Load the button battery after normal.

B. This product is a precision timing device. It should avoid severe impact, avoid high temperature, and avoid being placed in a corrosive gas environment to avoid damage. Since this product is an electronic device, it should avoid short circuit of internal circuit caused by liquid immersion, especially corrosive liquids.

Warning: It is strictly forbidden to connect the clock power cable directly to the 110V or 220V mains. Otherwise, the circuit will be burnt due to excessive voltage. In this case, the product is not guaranteed.
