PART IDENTIFICATION CHART

Use the drawings below to identify the small parts needed for assembly. The number in parentheses below each drawing is the key number of the part, from the PART LIST near the end of this manual. The number following the key number is the quantity needed for assembly. **Note: If a part is not in the hardware kit, check to see if it has been preassembled. Extra parts may be included.**

ASSEMBLY

- To hire an authorized service technician to assemble this product, call 1-800-445-2480.
- Assembly requires two persons.
- Place all parts in a cleared area and remove the packing materials. Do not dispose of the packing materials until you finish all assembly steps.
- Left parts are marked “L” or “Left” and right parts are marked “R” or “Right.”

- To identify small parts, see page 5.

In addition to the included tool(s), assembly requires the following tools:

one Phillips screwdriver 

one adjustable wrench 

Assembly may be easier if you have a set of wrenches. To avoid damaging parts, do not use power tools.

1. Identify the Rear Stabilizer (14), which has a Leveling Foot (43) near each end.

Set a sturdy piece of packing material under the rear of the Frame (1). **Have a second person hold the Frame to prevent it from tipping while you complete this step.**

Attach the Rear Stabilizer (14) to the Frame (1) with two M10 x 75mm Screws (36).

Remove the packing material.

2. Set a sturdy piece of packing material under the front of the Frame (1). **Have a second person hold the Frame to prevent it from tipping while you complete this step.**

Attach the Front Stabilizer (2) to the Frame (1) with two M10 x 75mm Screws (36).

Remove the packing material.

3. Orient the Upright (3) and the Top Shield (9) as shown.

Have a second person hold the Upright (3) and the Top Shield (9) near the Frame (1) until you complete step 4.

Connect the Upper Wire (32) to the Lower Wire (31). Then, pull the excess Upper Wire out of the top of the Upright.

4. **Tip: Avoid pinching the wires.** Slide the Upright (3) onto the Frame (1).

Attach the Upright (3) with four M8 x 18mm Screws (35).

Slide the Top Shield (9) downward and press it onto the Left and Right Shields (17, 18).

5. **See the inset drawing.** Remove the Seat Knob (8) from the Seat Carriage (56). Next, attach the Seat (12) to the Seat Carriage (56) with four M8 Locknuts (37). **Note: The Locknuts may be preattached to the underside of the Seat.**

Next, orient the Seat Carriage (56) and the Seat Post (5) as shown. Set the Seat Carriage on the Seat Post and hold it in place.

Insert the Seat Knob (8) upward into the Seat Post (5), and tighten the Seat Knob into the Carriage Clamp (57) inside the Seat Carriage (56).

6. Using an adjustable wrench, tighten the Adjustment Knob (11) into the Frame (1).

Next, loosen the Adjustment Knob (11) a few turns, pull it outward, and insert the Seat Post (5) into the Frame (1).

Slide the Seat Post (5) upward or downward to the desired position, and release the Adjustment Knob (11) into one of the adjustment holes in the Seat Post. **Move the Seat Post upward or downward slightly to make sure that the Adjustment Knob is engaged in one of the adjustment holes in the Seat Post.** Then, tighten the Adjustment Knob.

7. Attach the Water Bottle Holder (49) to the Upright (3) with two M4 x 22mm Screws (54).

8. Identify the Right Handlebar (48) and orient it as shown.

While a second person holds the Right Handlebar (48) near the Upright (3), tie the indicated wire tie to the Right Pulse Wire (42). Then, pull the other end of the wire tie upward out of the top of the Upright.

Tip: Avoid pinching the wire. Slide the Right Handlebar (48) onto the Upright (3).

Attach the Right Handlebar (48) with two M8 x 38mm Bolts (53) and two M8 Locknuts (37). **Make sure that the Locknuts are in the hexagonal holes.**

Attach the Left Handlebar (47) in the same way.

9. The Console (6) can use four D batteries (not included); alkaline batteries are recommended. Do not use old and new batteries together or alkaline, standard, and rechargeable batteries together. **IMPORTANT: If the Console has been exposed to cold temperatures, allow it to warm to room temperature before inserting batteries. Otherwise, you may damage the console displays or other electronic components.** Remove the screws and the battery covers, insert batteries into the battery compartments, and then reattach the battery covers. **Make sure to orient the batteries as shown by the diagrams inside the battery compartments.**

To purchase an optional power adapter, call the telephone number on the front cover of this manual. To avoid damaging the console, use only a manufacturer-supplied power adapter. Plug one end of the power adapter into the receptacle inside the indicated battery compartment; route the power adapter through the notch in the battery cover. Then, plug the other end into an outlet installed in accordance with all local codes and ordinances.

10. While a second person holds the Console (6) near the Upright (3), connect the wires on the Console to the Upper Wire (32) and to the Right and Left Pulse Wires (42, 28).

Insert the excess wire into the Upright (3) or into the Console (6).

Tip: Avoid pinching the wires. Attach the Console (6) to the Upright (3) with four M4 x 16mm Screws (40).

11. Attach the Handlebar Cover (19) to the Upright (3) with two M4 x 16mm Screws (40).

Using an adjustable wrench, **firmly tighten** the Right Pedal (26) **clockwise** into the right arm of the Crank (13).

Tighten the Left Pedal (not shown) **counter-clockwise** into the left arm of the Crank (not shown).

Adjust the strap on the Right Pedal (26) to the desired position, and press the end of the strap onto the tab on the Right Pedal. **Adjust the strap on the Left Pedal (not shown) in the same way.**

13. **Make sure that all parts are properly tightened before you use the exercise bike.** Note: Extra parts may be included. Place a mat under the exercise bike to protect the floor or carpet.

HOW TO USE THE EXERCISE BIKE

HOW TO ADJUST THE HEIGHT OF THE SEAT

For effective exercise, the seat should be at the proper height. As you pedal, there should be a slight bend in your knees when the pedals are in the lowest position.

To adjust the height of the seat, first loosen the post knob a few turns. Next, pull the knob outward, slide the seat post upward or downward to the desired position, and then release the knob into one of the adjustment holes in the seat post. **Move the seat post upward or downward slightly to make sure that the knob is engaged in one of the adjustment holes in the seat post.** Then, tighten the knob.

HOW TO ADJUST THE HORIZONTAL POSITION OF THE SEAT

To adjust the horizontal position of the seat, first loosen the seat knob a few turns. Then, move the seat forward or backward to the desired position, and firmly tighten the knob.

HOW TO ADJUST THE PEDAL STRAPS

To adjust the pedal straps, first pull the ends of the straps off the tabs on the pedals. Then, adjust the straps to the desired position, and press the ends of the straps onto the tabs.

HOW TO LEVEL THE EXERCISE BIKE

If the exercise bike rocks slightly on your floor during use, turn one or both of the leveling feet under the rear stabilizer until the exercise bike is level.

FEATURES OF THE CONSOLE

The advanced console offers an array of features designed to make your workouts more effective and enjoyable.

When you use the manual mode of the console, you can change the resistance of the pedals with the touch of a button. As you exercise, the console will provide continuous exercise feedback. You can even measure your heart rate using the handgrip heart rate monitor.

Lose unwanted pounds with the progressive 8-week weight-loss program. Each workout in the program controls the resistance of the pedals as it guides you through an effective workout designed to help you achieve the results you want.

The console also offers a selection of preset workouts. Each preset workout automatically changes the resistance of the pedals as it guides you through an effective workout.

You can even connect your MP3 player or CD player to the console sound system and listen to your favorite music or audio books while you exercise.

To use the manual mode, see page 15. **To use an 8-week weight-loss workout**, see page 17. **To use a preset workout**, see page 18. **To use the sound system**, see page 19. **To use the user mode**, see page 19.

Note: Before using the console, make sure that batteries are installed (see assembly step 9 on page 10). If there is a sheet of plastic on the display, remove the plastic.

HOW TO USE THE MANUAL MODE

1. Turn on the console.

Press any button or begin pedaling to turn on the console.

When you turn on the console, the display will turn on. A tone will sound and the console will be ready for use.

2. Select the manual mode.

When you turn on the console, the manual mode will be selected.

If you have selected a workout, reselect the manual mode by pressing the Aerobic or Performance button repeatedly until a track appears in the center display.

3. Begin pedaling and change the resistance of the pedals as desired.

As you pedal, change the resistance of the pedals by pressing the Digital Resistance increase and decrease buttons.

Note: After you press the buttons, it will take a moment for the pedals to reach the selected resistance level.

4. Follow your progress with the display.

The left display—This display can show the elapsed time and the approximate number of calories you have burned. The display will change modes every few seconds.

Note: During a preset workout, the display will show the time remaining in the workout.

The left display will also show your heart rate when you use the handgrip heart rate monitor (see step 5).

The center display

This display will show the resistance level of the pedals for a few seconds each time the resistance level changes.

This display will also show a track representing 1/4 mile (400 m). As you exercise, indicators will appear in succession around the track until the entire track appears. The track will then disappear and the indicators will again begin to appear in succession.

The right display

This display can show the distance you have pedaled in miles or kilometers and your pedaling speed in miles per hour or kilometers per hour. The display will change modes every few seconds.

5. **Measure your heart rate if desired.**

If there are sheets of plastic on the metal contacts on the handgrip heart rate monitor, remove the plastic. In addition, make sure that your hands are clean. To measure your heart rate, hold the handgrip heart rate monitor with your palms resting against the contacts. **Avoid moving your hands or gripping the contacts tightly.**

When your pulse is detected, a heart-shaped symbol will flash in the display and then your heart rate will be shown. **For the most accurate heart rate reading, hold the contacts for at least 15 seconds.**

If your heart rate is not shown, make sure that your hands are positioned as described. Be careful not to move your hands excessively or to squeeze the contacts tightly. For optimal performance, clean the contacts using a soft cloth; **never use alcohol, abrasives, or chemicals to clean the contacts.**

6. **Turn on the fan if desired.**

The fan has high and low speed settings. Press the fan button repeatedly to select a fan speed or to turn off the fan.

Note: If the pedals do not move for about thirty seconds, the fan will turn off automatically.

7. **When you are finished exercising, the console will turn off automatically.**

If the pedals do not move for several seconds, a series of tones will sound, the console will pause, and the time will flash in the display.

If the pedals do not move for several minutes, the console will turn off and the display will be reset.

MAINTENANCE AND TROUBLESHOOTING

Inspect and tighten all parts of the exercise bike regularly. Replace any worn parts immediately.

To clean the exercise bike, use a damp cloth and a small amount of mild soap. **IMPORTANT: To avoid damage to the console, keep liquids away from the console and keep the console out of direct sunlight.**

CONSOLE TROUBLESHOOTING

Most console problems are the result of low batteries. See assembly step 9 on page 10 for battery replacement instructions.

If the console does not display your heart rate when you use the handgrip heart rate monitor, see step 5 on page 16.

HOW TO ADJUST THE REED SWITCH

If the console does not display correct feedback, the reed switch should be adjusted.

To adjust the reed switch, you must remove the seat post, the post knob, and the top shield (see the instructions below).

To remove the Seat Post (5), loosen the Post Knob (11) a few turns, pull the Post Knob outward, and remove the Seat Post. Then, using an adjustable wrench, remove the Post Knob.

Using a flat screwdriver, release the tabs along the bottom edge of the Top Shield (9) and slide the Top Shield upward.

Locate the Reed Switch (21). Turn the Pulley (13) until a Pulley Magnet (16) is aligned with the Reed Switch. Loosen, but do not remove, the indicated M4 x 16mm Screw (40). Slide the Reed Switch slightly closer to or away from the Magnet, and then retighten the Screw.

Turn the Pulley (13) for a moment. If necessary, repeat the step above until the console displays correct feedback.

When the reed switch is correctly adjusted, reattach the shield cover, the post knob, and the seat post.

HOW TO ADJUST THE DRIVE BELT

If the pedals slip while you are pedaling, even while the resistance is adjusted to the highest level, the drive belt may need to be adjusted.

To adjust the drive belt, you must remove the seat post, the post knob, the top shield, the right pedal, and the right shield (see the instructions below).

To remove the Seat Post (5), loosen the Post Knob (11) a few turns, pull the Post Knob outward, and remove the Seat Post. Then, using an adjustable wrench, remove the Post Knob.

Using a flat screwdriver, release the tabs along the bottom edge of the Top Shield (9) and slide the Top Shield upward. Then, using an adjustable wrench, turn the Right Pedal (26) counterclockwise and remove it.

Remove all the screws from the left and right shields; **there are two sizes of screws in the shields—note which size of screw you remove from each hole.** Then, gently pull the right shield away from the frame.

Loosen the M6 x 20mm Hex Screw (46). Then, tighten the M10 x 50mm Hex Screw (33) until the Drive Belt (23) is tight.

When the Drive Belt (23) is tight, tighten the M6 x 20mm Hex Screw (46).

Then, reattach the left and right shields, the right pedal, the top shield, the post knob, and the seat post.

EXERCISE GUIDELINES

⚠ WARNING: Before beginning this or any exercise program, consult your physician. This is especially important for persons over age 35 or persons with pre-existing health problems.

The heart rate monitor is not a medical device. Various factors may affect the accuracy of heart rate readings. The heart rate monitor is intended only as an exercise aid in determining heart rate trends in general.

These guidelines will help you to plan your exercise program. For detailed exercise information, obtain a reputable book or consult your physician. Remember, proper nutrition and adequate rest are essential for successful results.

EXERCISE INTENSITY

Whether your goal is to burn fat or to strengthen your cardiovascular system, exercising at the proper intensity is the key to achieving results. You can use your heart rate as a guide to find the proper intensity level. The chart below shows recommended heart rates for fat burning and aerobic exercise.

| | | | | | | | |
|-----|-----|-----|-----|-----|-----|-----|---|
| 165 | 155 | 145 | 140 | 130 | 125 | 115 | ♥ |
| 145 | 138 | 130 | 125 | 118 | 110 | 103 | ♥ |
| 125 | 120 | 115 | 110 | 105 | 95 | 90 | ♥ |
| 20 | 30 | 40 | 50 | 60 | 70 | 80 | |

To find the proper intensity level, find your age at the bottom of the chart (ages are rounded off to the nearest ten years). The three numbers listed above your age define your “training zone.” The lowest number is the heart rate for fat burning, the middle number is the heart rate for maximum fat burning, and the highest number is the heart rate for aerobic exercise.

Burning Fat—To burn fat effectively, you must exercise at a low intensity level for a sustained period of time. During the first few minutes of exercise, your body uses carbohydrate calories for energy. Only after the first few minutes of exercise does your body begin to use stored fat calories for energy. If your goal is to burn fat, adjust the intensity of your exercise until your heart rate is near the lowest number in your training zone. For maximum fat burning, exercise with your heart rate near the middle number in your training zone.

Aerobic Exercise—If your goal is to strengthen your cardiovascular system, you must perform aerobic exercise, which is activity that requires large amounts of oxygen for prolonged periods of time. For aerobic exercise, adjust the intensity of your exercise until your heart rate is near the highest number in your training zone.

WORKOUT GUIDELINES

Warming Up—Start with 5 to 10 minutes of stretching and light exercise. A warm-up increases your body temperature, heart rate, and circulation in preparation for exercise.

Training Zone Exercise—Exercise for 20 to 30 minutes with your heart rate in your training zone. (During the first few weeks of your exercise program, do not keep your heart rate in your training zone for longer than 20 minutes.) Breathe regularly and deeply as you exercise; never hold your breath.

Cooling Down—Finish with 5 to 10 minutes of stretching. Stretching increases the flexibility of your muscles and helps to prevent post-exercise problems.

EXERCISE FREQUENCY

To maintain or improve your condition, complete three workouts each week, with at least one day of rest between workouts. After a few months of regular exercise, you may complete up to five workouts each week, if desired. Remember, the key to success is to make exercise a regular and enjoyable part of your everyday life.

SUGGESTED STRETCHES

The correct form for several basic stretches is shown at the right. Move slowly as you stretch; never bounce.

1. Toe Touch Stretch

Stand with your knees bent slightly and slowly bend forward from your hips. Allow your back and shoulders to relax as you reach down toward your toes as far as possible. Hold for 15 counts, then relax. Repeat 3 times. Stretches: Hamstrings, back of knees and back.

2. Hamstring Stretch

Sit with one leg extended. Bring the sole of the opposite foot toward you and rest it against the inner thigh of your extended leg. Reach toward your toes as far as possible. Hold for 15 counts, then relax. Repeat 3 times for each leg. Stretches: Hamstrings, lower back and groin.

3. Calf/Achilles Stretch

With one leg in front of the other, reach forward and place your hands against a wall. Keep your back leg straight and your back foot flat on the floor. Bend your front leg, lean forward and move your hips toward the wall. Hold for 15 counts, then relax. Repeat 3 times for each leg. To cause further stretching of the achilles tendons, bend your back leg as well. Stretches: Calves, achilles tendons and ankles.

4. Quadriceps Stretch

With one hand against a wall for balance, reach back and grasp one foot with your other hand. Bring your heel as close to your buttocks as possible. Hold for 15 counts, then relax. Repeat 3 times for each leg. Stretches: Quadriceps and hip muscles.

5. Inner Thigh Stretch

Sit with the soles of your feet together and your knees outward. Pull your feet toward your groin area as far as possible. Hold for 15 counts, then relax. Repeat 3 times. Stretches: Quadriceps and hip muscles.
