# HOW TO USE THE EXERCISE BIKE

## HOW TO ADJUST THE HEIGHT OF THE SEAT

To adjust the height of the seat, first loosen the post knob a few turns. Next, pull the knob outward, slide the seat post upward or downward to the desired position, and then release the knob into one of the adjustment holes in the seat post. **Move the seat post upward or downward slightly to make sure that the knob is engaged in one of the adjustment holes in the seat post.** Then, tighten the knob.

## HOW TO ADJUST THE PEDAL STRAPS

To adjust the pedal straps, first pull the ends of the straps off the tabs on the pedals. Then, adjust the straps to the desired position, and press the ends of the straps onto the tabs.

## HOW TO LEVEL THE EXERCISE BIKE

If the exercise bike rocks slightly on your floor during use, turn one or both of the leveling feet under the rear stabilizer until the exercise bike is level.

## HOW TO USE THE TABLET HOLDER

**IMPORTANT:** The tablet holder was designed for use with most full-size tablets. Do not place any other electronic device or object in the tablet holder.

To insert a tablet into the tablet holder, set the bottom edge of the tablet in the tray. **Make sure that the tablet is firmly secured in the tablet holder.** Reverse these actions to remove the tablet from the tablet holder.

## FEATURES OF THE CONSOLE

The advanced console offers an array of features designed to make your workouts more effective and enjoyable.

When you use the manual mode of the console, you can change the resistance of the pedals with the touch of a button. As you exercise, the console will provide continuous exercise feedback. You can even measure your heart rate using the handgrip heart rate monitor or a compatible heart rate monitor. **See page 19 for information about purchasing an optional chest heart rate monitor.**

You can also connect your smart device to the console and use an iFit® app to record and track your workout information.

Lose unwanted pounds with the progressive 8-week weight-loss program. Each workout in the program controls the resistance of the pedals as it guides you through an effective workout.

The console also offers a selection of preset workouts. Each preset workout automatically changes the resistance of the pedals and prompts you to maintain a target speed as it guides you through an effective workout.

You can even connect your personal audio player to the console sound system and listen to your favorite music or audio books while you exercise.

**To use the manual mode, see page 15. To use an 8-week weight-loss workout, see page 17. To use a preset workout, see page 18.**

**To use the sound system, see page 19. To connect your smart device to the console, see page 19. To connect your heart rate monitor to the console, see page 20. To use the settings mode, see page 20.**

**Note:** Before using the console, make sure that batteries are installed (see assembly step 7 on page 10). If there is a sheet of plastic on the display, remove the plastic.

# MAINTENANCE AND TROUBLESHOOTING

## MAINTENANCE

Regular maintenance is important for optimal performance and to reduce wear. Inspect and properly tighten all parts each time the exercise bike is used. Replace any worn parts immediately.

To clean the exercise bike, use a damp cloth and a small amount of mild soap. **IMPORTANT: To avoid damage to the console, keep liquids away from the console and keep the console out of direct sunlight.**

## CONSOLE TROUBLESHOOTING

Most console problems are the result of low batteries. To replace the batteries, see assembly step 7 on page 10.

If the console does not display your heart rate when you use the handgrip heart rate monitor, see step 5 on page 16.

## HOW TO ADJUST THE REED SWITCH

If the console does not display correct feedback, the reed switch should be adjusted.

To adjust the reed switch, you must remove the rear and front upright covers as described below.

**See assembly step 5 on page 9.** Using a standard screwdriver, release the tabs along the bottom edges of the Rear and Front Upright Covers (19, 20), remove the two M4 x 12mm Screws (57), and then remove the Rear and Front Upright Covers.

Locate the Reed Switch (35). Turn the Crank (40) until a Magnet (39) is aligned with the Reed Switch. Loosen, but do not remove, the two indicated M4.5 x 12mm Flange Screws (36). Slide the Reed Switch slightly closer to or away from the Magnet, and then retighten the Flange Screws.

Turn the Crank (40) so that the Magnet (39) passes the Reed Switch (35) repeatedly. Repeat these actions until the console displays correct feedback.

When the reed switch is correctly adjusted, reattach the rear and front upright covers.

## HOW TO ADJUST THE DRIVE BELT

If the pedals slip while you are pedaling, even while the resistance is adjusted to the highest level, the drive belt may need to be adjusted.

To adjust the drive belt, you must remove the seat post, the post knob, the post cover, the right pedal, the right access disc, and the right shield as described below.

To remove the Seat Post (10), loosen the Post Knob (18) a few turns, pull the Post Knob outward, and remove the Seat Post. Then, using an adjustable wrench, remove the Post Knob.

Using a standard screwdriver, release the tabs along the bottom edge of the Post Cover (16) and remove it. Then, using an adjustable wrench, turn the Right Pedal (29) counterclockwise and remove it.

Using a standard screwdriver, release the tabs around the edge of the right Access Disc (24), and then remove it from the Right Shield (22).

See the **EXPLODED DRAWING** on page 27.

Remove all of the screws from the Left and Right Shields (21, 22); **there are two sizes of screws in the shields—note which size of screw you remove from each hole.** Then, gently remove the Right Shield.

Loosen the M6 x 20mm Hex Screw (47). Then, tighten the Idler Screw (45) until the Drive Belt (15) is tight.

When the Drive Belt (15) is tight, tighten the M6 x 20mm Hex Screw (47).

Then, reattach the left and right shields, the right access disc, the right pedal, the post cover, the post knob, and the seat post.

# EXERCISE GUIDELINES

**⚠ WARNING:** Before beginning this or any exercise program, consult your physician. This is especially important for persons over age 35 or persons with pre-existing health problems.

The heart rate monitor is not a medical device. Various factors may affect the accuracy of heart rate readings. The heart rate monitor is intended only as an exercise aid in determining heart rate trends in general.

These guidelines will help you to plan your exercise program. For detailed exercise information, obtain a reputable book or consult your physician. Remember, proper nutrition and adequate rest are essential for successful results.

## EXERCISE INTENSITY

Whether your goal is to burn fat or to strengthen your cardiovascular system, exercising at the proper intensity is the key to achieving results. You can use your heart rate as a guide to find the proper intensity level. The chart below shows recommended heart rates for fat burning and aerobic exercise.

|     |     |     |     |     |     |     |   |
|-----|-----|-----|-----|-----|-----|-----|---|
| 165 | 155 | 145 | 140 | 130 | 125 | 115 | ♥ |
| 145 | 138 | 130 | 125 | 118 | 110 | 103 | ♥ |
| 125 | 120 | 115 | 110 | 105 | 95  | 90  | ♥ |
| 20  | 30  | 40  | 50  | 60  | 70  | 80  |   |

To find the proper intensity level, find your age at the bottom of the chart (ages are rounded off to the nearest ten years). The three numbers listed above your age define your “training zone.” The lowest number is the heart rate for fat burning, the middle number is the heart rate for maximum fat burning, and the highest number is the heart rate for aerobic exercise.

**Burning Fat**—To burn fat effectively, you must exercise at a low intensity level for a sustained period of time. During the first few minutes of exercise, your body uses carbohydrate calories for energy. Only after the first few minutes of exercise does your body begin to use stored fat calories for energy. If your goal is to burn fat, adjust the intensity of your exercise until your heart rate is near the lowest number in your training zone. For maximum fat burning, exercise with your heart rate near the middle number in your training zone.

**Aerobic Exercise**—If your goal is to strengthen your cardiovascular system, you must perform aerobic exercise, which is activity that requires large amounts of oxygen for prolonged periods of time. For aerobic exercise, adjust the intensity of your exercise until your heart rate is near the highest number in your training zone.

## WORKOUT GUIDELINES

**Warming Up**—Start with 5 to 10 minutes of stretching and light exercise. A warm-up increases your body temperature, heart rate, and circulation in preparation for exercise.

**Training Zone Exercise**—Exercise for 20 to 30 minutes with your heart rate in your training zone. (During the first few weeks of your exercise program, do not keep your heart rate in your training zone for longer than 20 minutes.) Breathe regularly and deeply as you exercise; never hold your breath.

**Cooling Down**—Finish with 5 to 10 minutes of stretching. Stretching increases the flexibility of your muscles and helps to prevent post-exercise problems.

## EXERCISE FREQUENCY

To maintain or improve your condition, complete three workouts each week, with at least one day of rest between workouts. After a few months of regular exercise, you may complete up to five workouts each week, if desired. Remember, the key to success is to make exercise a regular and enjoyable part of your everyday life.

## SUGGESTED STRETCHES

The correct form for several basic stretches is shown at the right. Move slowly as you stretch; never bounce.

### 1. Toe Touch Stretch

Stand with your knees bent slightly and slowly bend forward from your hips. Allow your back and shoulders to relax as you reach down toward your toes as far as possible. Hold for 15 counts, then relax. Repeat 3 times. Stretches: Hamstrings, back of knees and back.

### 2. Hamstring Stretch

Sit with one leg extended. Bring the sole of the opposite foot toward you and rest it against the inner thigh of your extended leg. Reach toward your toes as far as possible. Hold for 15 counts, then relax. Repeat 3 times for each leg. Stretches: Hamstrings, lower back and groin.

### 3. Calf/Achilles Stretch

With one leg in front of the other, reach forward and place your hands against a wall. Keep your back leg straight and your back foot flat on the floor. Bend your front leg, lean forward and move your hips toward the wall. Hold for 15 counts, then relax. Repeat 3 times for each leg. To cause further stretching of the achilles tendons, bend your back leg as well. Stretches: Calves, achilles tendons and ankles.

### 4. Quadriceps Stretch

With one hand against a wall for balance, reach back and grasp one foot with your other hand. Bring your heel as close to your buttocks as possible. Hold for 15 counts, then relax. Repeat 3 times for each leg. Stretches: Quadriceps and hip muscles.

### 5. Inner Thigh Stretch

Sit with the soles of your feet together and your knees outward. Pull your feet toward your groin area as far as possible. Hold for 15 counts, then relax. Repeat 3 times. Stretches: Quadriceps and hip muscles.
