

EN LCD WEATHERSTATION ALARM CLOCK OPERATING INSTRUCTIONS

Thank you for your purchase of this quality clock. Please read these instructions carefully and keep in a safe place for future reference.

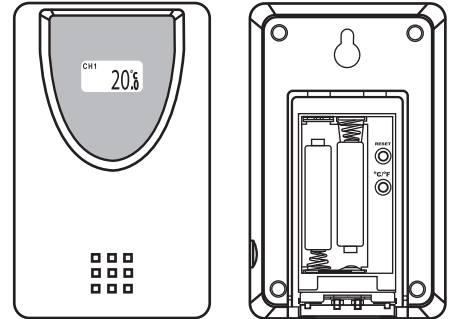

Display (fig 1)

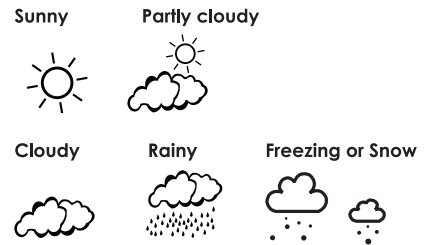

Back view (fig 2)

Outdoor Sensor (fig 3)

Weather Forecast (fig 4)

Connect to your USB charger (not supplied)

ACTIVATING THE OUTDOOR SENSOR

Insert 2 x AAA battery into the battery compartment, taking care to observe the polarity. The outdoor sensor will automatically start to transmit the temperature and humidity reading. The sensor should be securely mounted onto a horizontal surface in a dry and shaded area. The maximum transmission range is up to 70 meters from the clock. **Note:** Reset the sensor if it is moved to a new location. To select °C or °F display, press the °C /°F button at the back of the sensor.

ACTIVATING THE CLOCK

Remove the protective film from the LCD screen.

To activate the clock you can use either the battery or USB power.

Battery power: Insert 2 X AA batteries into the battery compartment, taking care to observe the polarity.

Note: On battery power the backlight will only light up for 5 seconds and the Alarm will not sound.

USB power: Insert the DC jack of the supplied USB lead into the back of the clock and connect other end to your USB charger (not supplied), now plug the charger into a standard household outlet.

Note: On USB power the backlight will light up continually. It is recommended to use USB power when setting the clock.

When the clock is activated the weather forecast icon will flash on the display, enter the current weather by pressing the ▲ or ▼ button. Press the WEATHER button to confirm the setting. The clock automatically starts searching for the signal from the outdoor sensor for 3 minutes. RF "📶" icon will start to flash.

Note: Press "RF SEARCH" button for 3 seconds to start or stop transmission manually.

Note: Always reset the clock if it is moved to a new location.
